FORMULAONE HIGH PERFORMANCE AUTO TINT | LLumar

Maintenance

Keeps Your Tint Looking Brand-New for Life

Simple care takes just minutes and ensures your FormulaOne film stays crystal-clear and flawless for decades.

- Wait 3–5 days (longer in cold/humid weather) before rolling windows down
- No interior cleaning for a full 30 days
- Tiny water bubbles, cloudy haze, or “fingerprint” marks? 100% normal – trapped moisture/adhesive will evaporate and disappear on their own (never push or pick at them) If they persist please call us to review the install & make sure your tint job is up to industry standards for installation.
- A few dust specks? Normal in every professional install - Older vehicles have more dust specs due to the amount of debris trapped into the gaskets & seals, this is unavoidable for any installer.
- After 30 days: clean only with ammonia-free solution (a couple drops baby shampoo + water) and soft microfiber cloth works great. Never use ammonia cleaners (Windex, 409, etc.), rough paper towels, brushes, or razor blades on the film
- Exterior glass cleans exactly like normal. Your tint is on the inside of your vehicle.
- Avoid high-pressure wands aimed at edges
